

ASTRA CRM

Enterprise Multi-Tenant Sales & Customer Lifecycle Platform
Detailed Development & System Workflow Specifications

Document Version: 1.0.0 (Stable Release)
Security Classification: Internal/Confidential
Created Date: July 22, 2026

1. Executive Summary & Overview

ASTRA CRM is an enterprise-grade multi-tenant CRM suite designed specifically to optimize product sales operations across the complete customer lifecycle. The platform ensures strict multi-organization data isolation, implements a zero-trust role-based security framework, tracks omnichannel leads, manages opportunities via Kanban pipelines, calculates product quotes with dynamic tax/discount math, fulfills orders/invoices, and handles customer support warranty verification.

2. System Architecture & Tenant Provisioning

Each client organization operates as an isolated tenant database instance. Administrators onboard tenants through the Client Onboarding Wizard, where they set max seats, default currency, and compliance rules (GDPR, SOC2 Type II, ISO27001). A global context switcher allows switching workspaces securely.

Module Name	Description & Operations	Access Level
Client Onboarding	Provision workspaces, manage subscription seats, and configure subdomains.	Super Admin
Security Dashboard	Immutable Audit Log tracker, 2FA enforcement, and IP Whitelist subnets.	Org Admin
Lead Management	Omnichannel lead capture with auto-scoring and duplicate email flag detection.	Sales Exec+
Sales Kanban Pipeline	Drag-and-drop opportunity cards with weighted forecast projections.	Sales Exec+
Quotation Engine	Line-item calculations, multi-tier tax (VAT/GST), and Manager discount override approvals.	Sales Rep + Mgr
Order Fulfillment	Convert accepted quotes to order status tracking and invoice PDF generation.	Finance / Ops
Support Warranty Desk	Support tickets with SLA timers and automated catalog warranty verification.	Support Agent

3. End-to-End Sales Lifecycle Workflow

The workflow inside ASTRA CRM is designed for zero latency and audit accountability. Here is the lifecycle flow:

Step A: Authentication & Portal Access

Users log in via the unified auth screen. Admins are prompted to enter a 6-digit TOTP two-factor code. Access is restricted to whitelisted IP address blocks.

Step B: Omnichannel Lead Intake & Duplicate Filtering

Leads enter from web forms or ad integrations. The scoring matrix evaluates value potential. If a duplicate email matches a previous contact, the system highlights a warning badge to consolidate sales touchpoints.

Step C: Opportunity Mapping & Weighted Projections

Qualified leads are converted into Opportunities on the Kanban board. The expected revenue is calculated using: $\text{Value} * \text{Stage Probability \%}$.

Step D: Pricing, Tax, and Discount Quotation Engine

Quotations calculate taxes and volume discounts. If the discount exceeds 10%, approval is routed to the Sales Manager or Finance role.

Step E: Order Conversion & Warranty Support

Accepted quotes convert to orders and auto-generate invoices. Support tickets log requests and query the catalog database to verify product warranty coverage.

4. Core Mathematical Formula Specifications

Quotation Total Formula:

```
Subtotal = Sum(Unit Price * Qty)
Discount Amount = Subtotal * (Discount % / 100)
Tax Total = Sum(Line Item After Discount * Tax Rate %)
Grand Total = (Subtotal - Discount Amount) + Tax Total
```
